

Digital Inclusion VET

The “Digital Inclusion VET” project aims to improve Vocational Education and Training (VET) to facilitate the reinsertion into the labor market of unemployed people who lack digital skills and need to adapt to Industry 4.0.

This goal is achieved through the improvement of digital and virtualization skills of VET trainers and teachers, the development of new teaching methodologies aimed at unemployed adults, and the provision of updated digital skills and competences to this group, in order to take advantage of the opportunities offered by digital technologies to reintegrate unemployed people into the labor market and improve the quality of VET in Europe.

Teacher Training on Digitalisation and Virtualisation

During the 4th, 5th and 6th of June 2024, all the partners of the Digital Inclusion VET project were received at the facilities of Academia Formacao do Norte, to carry out the Teacher Training on Digitalisation and Virtualisation.

Through this training, the project continues to move towards its main objectives; to improve the digital virtualization skills of VET trainers and teachers so that they can train unemployed people who lack these skills, so that they can more easily reintegrate into Industry 4.0.

Chronicle of the Teacher Training

During the first day and after an introduction to the project for the attendees, the teacher training manual was presented in its electronic format and a first contact was made with its materials. In addition, the website and social networks of the project were presented, where you can find all the information available about it (<http://www.digitalvet.eu>).

Throughout the second day, the contents of the manual were studied in detail, which serve as training for teachers in the main educational techniques that will allow them to transfer to their students the knowledge in digital skills necessary for their incorporation into the labor market.

In addition, a visit was made to the facilities of the stakeholder FEP Innovation Hub, where the hosts gave us an interesting presentation on Digitalization and virtualization with the latest digital tools such as AI.

Finally, on the last day, the partners met to evaluate the contents of the handbook and to make a feedback report highlighting the strong points of the handbook and those that could be strengthened.

The next steps of the project were also established, among which is the realization of a MOOC course on digital skills training and virtualization for employability.

Project Partners

- IES Gonzalo Anaya (Leader of the project, Spain)
- AFN ACADEMIA FORMAÇÃO DO NORTE, UNIPESSOAL LDA (Portugal)
- INNETICA (Spain)
- OECON (Greece)
- ilnformatica S.r.l. (Italy)
- studio risorse s.r.l. (Italy)
